

How to use this document

In this document you find an overview of scientific journals which publish articles in the field of educational research. The journals and more detailed information on those (including link to their website and latest impact factor) are sorted by topics and/or disciplines they cover.

Please use the table of contents below and click on the topic/discipline which interests you. Journals are listed in an alphabetical order.

For each journal listed you will receive the following information:

- **Name** of the academic journal (including a link to the journal's website)
- **ISSN** numbers (pISSN... print ISSN / eISSN... Online ISSN)
- **Online availability** (yes / no – FT... fulltext)
- **Impact factor** = The impact factor (IF) of an academic journal is a measurement of the average number of citations to recent articles published in the same journal. Impact factors are used as a quick way of measuring the importance and impact of a scientific journal. The impact factor is very discipline dependent, and you cannot compare impact factors across different disciplines due to the speed with which papers get cited and used. The impact factors for journals have been calculated annually since 1975 and is now presented and indexed in the Journal Citation Reports by Thomson Reuters.

All listed impact factors are based on the JCR year 2014.

- **BRI level** = Bibliometric research indicator (BRI) / Bibliometriske forskningsindikator (BFI) The Bibliometric Research Indicator is a method for calculating the performance based model for allocating base funding for the Danish universities.

The Indicator is based on a list named "the authoritative list of series (conference series, book series and journals) and publishers". The list is prepared and audited annually by more than 350 Danish researchers from 67 professional subject categories.

The publications (conference series, book series and journals) are divided into two levels (level 2 and level 1). Level 1 contains 80%, and level 2 contains the 20% at the top level as perceived by leading researchers in the respective fields.

You can read more about BFI at the the Ministry of Science, Innovation and Higher Education [website](#).

Please note, that apart from journals dedicated to educational research it is recommended to check whether discipline-specific research journals also publish papers about how this discipline can be taught and learnt in higher education.

If you have any questions or comments (e.g. additions) regarding this document please do not hesitate to contact LearningLab's educational consultant Sabine Schmidt (sabis@llab.dtu.dk).
